1/ The chromaticity of the illuminated display, expressed as x and y coordinates on the CIE chromaticity diagram, shall lie within areas bounded by the coordinates listed for each color, using a source illuminate of 2360°K.

2/ Switch photometric brightness, when viewed from the front of the applicable pushbutton display and using midget flange, T-1 ¾ incandescent lamps operated at a 34 ±.02 MSCP.

3/ SL = Spectrum Locus (where intersected by other coordinate pair).
